

Swiss O₂ Spray | oxygenated-water spray

Technical Data

A fresh breeze for Skin & Body

Oxygen power from  Switzerland

Swiss O₂ Spray | oxygenated-water spray

Technical Data – General Information

Content:	Oxygenated Water
Propellant:	100% pure medical oxygen
Oxygen dilution:	45mg – 120mg oxygen /liter– depending on storage temperature. This means between 10 to 20 times more oxygen than in normal water. The high oxygen content is produced by a physical rule. The greater the pressure and the lower the temperature between a gas and a liquid, the higher the dilution of the gas with the liquid.
Quality:	Pharmacological
Can Type:	Aluminium-Aerosol Can
Can Pressure:	7 - 8 bar
Security:	maximum pressure - standard 18 bar
Standard can colours:	White, black, and brushed aluminium
Standard cap colours:	White, black and transparent
Special cap colours:	On demand (minimum order quantity 25'000units)

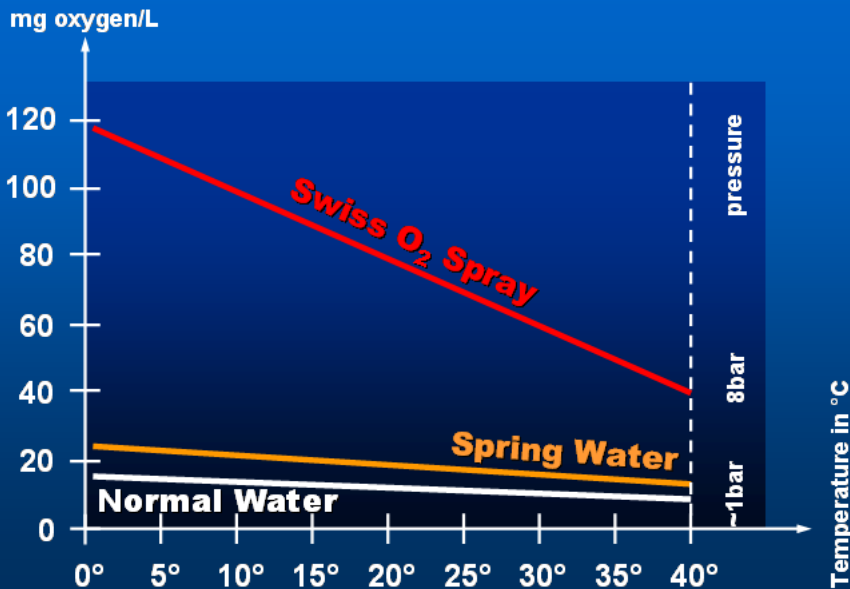

It is advisable to check with the national authorities if there is any national regulation that requires special labeling for aerosol products.

Swiss O₂ Spray | oxygenated-water spray

Technical Data – Oxygen Content

Oxygen content comparison in mg oxygen/l (in relation of pressure and storage temperature)

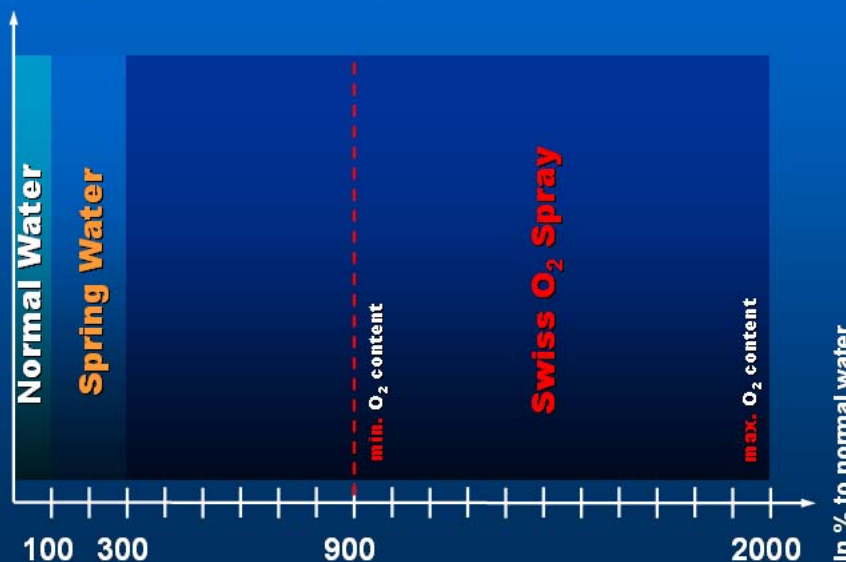

Comparison: Oxygen content between normal water, spring water and Swiss O₂ Spray. The content of oxygen and water is pressure and temperature dependant. The highest content of oxygen is achieved at 4 - 5°C (fridge).

Chilled Swiss O₂ Spray from the fridge (5°C) carries more diluted oxygen then at room temperature:

- up to 120mg oxygen / liter chilled at 5°C
- approx. 70mg oxygen / liter at room temperature (24°C)

Attention: Do not freeze Swiss O₂ Spray.

Oxygen content comparison in % (normal water=100%)

Oxygen content	
	mg O ₂ /l
normal water	5 - 12
spring water	15 - 25
Swiss O ₂ Spray	45 - 120
